

EXPLAINER

goal

Set a [finish line](#), and let it run. Claude keeps working until it crosses it. No prompting each step. No babysitting each turn.

The loop, *playable*

What every /goal needs

Three parts. Miss one and it runs forever, or stops wrong. Pick a goal to see all three.

TRY IT — PICK A GOAL:

Apply a brand guide

Build a slide deck

Update a vibe-coded app

1

A measurable end state

What does done look like? Make it countable.

FOR THIS GOAL

"every page uses the new colors and fonts"

2

A stated check

How will Claude prove it? Tell it what to show you.

FOR THIS GOAL

"list each page and what it now uses"

3

Constraints

What's off-limits? Set the guardrails.

FOR THIS GOAL

"don't rewrite the copy; if a font is missing, ask"

Some pointers

GOOD USE CASES

- Apply a brand guide, every rule
- Build a slide deck from your notes
- Update a vibe-coded app
- Make a landing page from a brief
- Clean up a messy spreadsheet

⚠ WHAT TO EXPECT

- You can use it with auto mode
- ! It doesn't work with plan mode
- Expect it to run for several minutes
- ! It can be token-heavy – heads up

FIG. 04 · DON'T SKIP THIS

Human at the helm

Whatever it delivers, check it. You're at the **helm**, not just in the loop. Make sure it matches what you pictured.

TL;DR

It's not perfect. Read it like a teammate's work.
